

Inver SpA : REACH Regulation

Dear Customer,

on your request about application of REACH REGULATION (n° 1907/2006), we inform that Inver is defined like "downstream user" , therefore we have no pre-registration or registration obligations of its products and for substances we use within the EU.

Inver not produce chemicals, which are instead subject to pre-registration or registration with ECHA (European Chemicals Agency)

Reach requires Industries to ensure that the chemicals it manufactures and places on the market in the EU do not adversely affect human health or the environment. Inver supports the aims and objectives of REACH.

Also inform you that our suppliers of raw materials, if producers of substances chemical or non-EU importers were responsible for pre-registration and / or recording substances and, if downstream users, we were assured that their suppliers were responsible for pre-registration/registration of substances.

For raw materials directly imported from countries outside the EU, Inver also takes care to ensure that the supplier has appointed an "Only Representative" to request appropriate documentation (submission file number, number of pre-recording or the name of the exclusive representative

The presence (at concentration > 0.1% w/w) of the substances in the Candidate List of Substances of Very High Concern in INVER paint is properly reported in the safety sheet.
